

LEAKING WATER COSTS MONEY

The size of your water bill can sometimes surprise you.
If so, you should question the condition of your water equipment.

A dripping tap or a running toilet is worth fixing immediately!

The average citizen in Vaasa uses ca. 130 liters of water daily in their home!

A fast dripping leak can use 3 liters of water in one hour. In a year that equals 26 m³ and the cost can rise to more than 104 €*!

A small leak in the toilet's water container can even use up to 30 liters of water in one hour. That equals 260 m³ in one year and will cost the consumer 1 040 €*!

* Calculated with water and sewage consumer prices from 2021.

Get modern water equipment

Water leakages are often easily fixed with low costs for example by changing seals on taps or the toilet's water container. New toilets use half as much water as old ones.

Keep an eye on the water meter to reveal hidden leaks.

By reading your water meter every month it is easier to find hidden leaks if the water consumption varies much from the normal.

A tiny hole this size will cause a fast dripping leak that can consume roughly 30 m³ of water in one year!

A leak of this size causes a thin flow and the water consumption can rise by more than 300 m³ per year!

A hole this size, in the toilet for example, can cause a continuing flow and in one year consume roughly 3 000 m³ of water!

A leak of this size already causes a proper streaming and the water consumption can rise by 30 000 m³ in one year!

TAKE CARE OF YOUR SEWER'S HEALTH

**Things that don't belong in the toilet
can cause blockages and leaks!**

Your water fee buys you more than just clean tap water. Water utility companies work hard daily for the environment by cleaning your sewage water. The harder you make the cleaning process, the more expensive it becomes.

**Your toilet
does not eat
junkfood!**

**Chemicals and grease
cause blockages in the
sewer and increase the
strain on our waters.
Therefore never flush
any of the following
down the drain:**

- × Paints, glue or laquer
- × Dissolvents (turpentine)
- × Oil or other greases
- × Antibacterial detergents
- × Acids (battery acid, formic acid)

**The sewer holds
no secrets!**

**Viemäri
EI pidä
salaisuuksia!**
